ABOUT ME

I am an experienced software developer passionate about creating robust and scalable web applications that help solve problems and drive business value. My specialty lies in React, with a knowledgeable background in creating full-stack web applications. I am known for having strong project management skills, a collaborative work ethic, and a passion for personal development. I utilize my degree in video game engineering to create web applications with user experience as the primary focus. I take pride in my charismatic personality, reliable work ethic, and honest perspective.

TECHNICAL SKILLS

React.js | JavaScript | TypeScript | Next.js | Redux.js | JSON | CSS | HTML5 | Bootstrap | Antd | Express.js | Jest
Node.js | MySQL | PostgreSQL | MongoDB | Git | NPM | Docker | Heroku | ORM | Vercel

CAREER EXPERIENCE

HomeLister, Remote   **11/2022 – Present**
Full Stack Engineer
Architected and developed full-stack application components in a fast-paced venture-backed prop-tech startup.

- Designing and implementing a highly-scalable solution that allows for the creation of dynamic checklists. Checklists and checklist items are conditionally presented to users based on complex business logic.
- Implementing core programmable voice features leveraging the Twilio API, with a focus on voicemail recording storage and retrieval.
- Developed web pages that allowed users to make offers on a house by designing and implementing scalable architecture solutions utilizing Prisma ORM, Node.js and Express.js while following RESTful API guidelines.
- Collaborated with the product and developer teams to strategically plan and deliver features for future development.
- Conducted peer pull request code reviews and participated in multiple pair coding sessions with senior developers.

HomeLister, Remote   **07/2021 – 11/2022**
Jr Full Stack Engineer
Developed full-stack application components as part of an agile team of experienced developers.

- Migrated and rebuilt numerous web pages and application components from legacy Angular to React using Next and TypeScript.
- Delivered multiple React focused page features and reusable custom components to spec based on design specifications.
- Identified and resolved various high-priority bug tickets.

All About Parking, San Jose, CA   **02/2018 – 11/2021**
Application Support Engineer
Corporate level environment providing IT support, tool development, and training material for the company.

- Developed 26 internal Appsheet applications for operations that directly continued client relationships, improved internal communications, and optimized employee daily tasks.
- Communicated with HR, Operations, Sales, and the CEO to enhance and automate daily tasks by utilizing my skills in JavaScript, Appsheet, and Google Apps Script.
- Created IT department ticket management pipeline by implementing project management tools and automating workflows, increasing team productivity by approximately 3 hours per day.
- Constructed 58 visual analytical reports for multiple departments through the use of Data Studio and Google Analytics that resulted in expedited high-level business decisions.

EDUCATION

Software Development Mastermind Program (SDMM) – 2020
A rigorous hands-on mentorship program that simulates a work environment by focusing on building real-world projects while receiving coaching from industry software developers.

Bachelors of Science (BS), Degree in Game Design and Engineering - 2017
Cogswell College, San Jose, CA 95134
